Introduction to the Z API and Zapp SDK

The Z-API brings the power of [programmable cryptography](#) to your web app, allowing you to create provable data and zero-knowledge proofs in as few as 10 lines of code. Powered by Zupass, this unlocks new options for privacy, user control of data, and interoperability.

What's a Zapp?

Zupass provides users with a private data store and a suite of cryptographic tools to make zero-knowledge proofs about that data. Zapps are apps which integrate with Zupass to provide those features to their users.

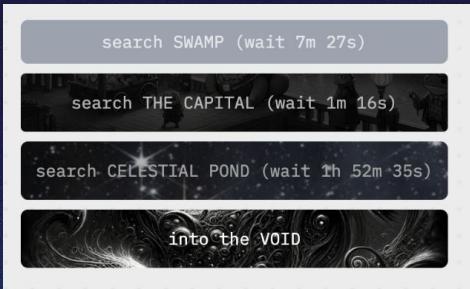

A Zapp might use data from the user's Zupass store to authenticate them, or might store new data in Zupass. Because the data store is owned by the user, that data is available to any other applications the user choose to share it with.

Zapps are just regular web applications, and they can also read and write data from other remote sources, such as back-end services or platforms. Your Zapp does not have to use Zupass as its only, or primary, data store. However, you *can* build Zapps which work only with data stored in Zupass if you want to.

The Tale of Kultillos

"In the heart of an ancient forest, a priest stood before a cauldron, his hands trembling as he prepared to juice Kultillos, the Necrofrog, whose radiant yet eerie beauty shimmered under the ghostly moonlight. With a swift leap, Kultillos evaded the priest's grasp, but the air crackled with a dark energy that slowed the frog's speed, binding him in place as the ritual commenced. As the priest squeezed the vibrant green essence from the frog, the cries of countless lost souls echoed in the stillness, transforming the air into a tapestry of sorrowful whispers. With each drop collected, the disfigured spectral minions stirred to life, ready to march behind Kultillos in a haunting procession through the realms"

Meerkat for Attendees

Top Questions (21)

How often does L2's have to post to blobs?
What trade-offs can they make to post less often?

3 ↑

Would be possible to scale the blob size by targeting the fee metrics at L2? to reach a specific usd target (ie 1 cent usd)

2 ↑

What are some things you think Ethereum should enshrine that can solve a lot of these (scaling) problems?

2 ↑

@neth4n @skylarw just wanted to thank you for making this devcon so great! And in particular the speaker experience is better than any other event I spoke at. The crew is doing a great job, and getting the questions via an app is a huge improvement over having people in the audience asking via a mic. I always struggled to understand the questions from the audience and this made it easy. Also helped prioritize the questions people actually care about. And of course the AA hub is a great addition. Best devcon so far, setting a high bar for the future :)
